PROFESSIONAL SUMMARY

SOC Analyst with hands-on experience in threat hunting, static and behavioral malware analysis, digital forensics, incident investigation, and detection engineering. Skilled in investigating Windows malware using Procmon, Sysmon, Process Explorer, API Monitor, Wireshark, INetSim, FakeDNS, Regshot, and Autoruns to identify persistence mechanisms, command-and-control (C2) communications, process injection, secondary payload delivery, and Indicators of Compromise (IOCs). Experienced in Splunk threat hunting, DFIR investigations with Velociraptor, malware reverse engineering, and MITRE ATT&CK-mapped analysis. Proficient in translating investigative findings into Sigma, Splunk SPL, Microsoft Sentinel (KQL), YARA, and Elastic detection content while producing professional investigation reports suitable for incident response and threat hunting.

TECHNICAL SKILLS

SIEM & Detection Engineering: Splunk, Elastic Security (ELK), Microsoft Sentinel (KQL), Sigma Rules

Malware Analysis: Static Malware Analysis, Behavioral Malware Analysis, PESTudio, Detect It Easy (DIE), FLOSS, CAPA, Ghidra, Strings, ExifTool, VirusTotal

DFIR & Endpoint Investigation: Velociraptor, Sysmon, Procmon, Process Explorer, Process Informer, Autoruns, API Monitor, Regshot, FTK Imager, KAPE, MemProcFS, Volatility

Network Analysis: Wireshark, INetSim, FakeDNS, TCP/IP, DNS, HTTP, HTTPS, PCAP Analysis

Threat Hunting: MITRE ATT&CK, IOC Extraction, Threat Intelligence, Detection Engineering, IOC Correlation

Programming: Python, PowerShell, Bash

Operating Systems: Windows, Linux

PROFESSIONAL EXPERIENCE

Threat Intelligence Analyst — OZ Digital Tech Nig Ltd, Nigeria

Mar 2024 – Mar 2025

- Analyzed open-source and internal threat intelligence feeds and mapped threat actor TTPs to the MITRE ATT&CK framework
- Produced actionable intelligence reports with IOC enrichment and mitigation recommendations
- Supported SOC investigations and tracked malware, phishing, and ransomware campaigns

SOC Analyst — Suavetech Learning and Consult, Nigeria

Jan 2023 – Jan 2024

- Monitored and triaged SIEM alerts; investigated malware activity and unauthorized access attempts
- Performed log analysis across endpoints, servers, and network devices
- Conducted incident triage, escalation, and response support; tuned alerts to reduce false positives and documented incidents

PROJECTS

Behavioral Malware Investigation — walkthrough.exe

- Built an isolated malware analysis laboratory using FLARE-VM and REMnux with Host-Only networking
- Conducted an evidence-driven behavioral investigation of a simulated multi-stage malware sample
- Correlated Procmon, Sysmon, Wireshark, FakeDNS, INetSim, Process Explorer, Autoruns, Regshot, and API Monitor evidence
- Identified Registry Run Key persistence, DGA-based command-and-control communications, secondary payload retrieval, process injection, and simulated data exfiltration
- Extracted host and network Indicators of Compromise (IOCs) and mapped observed behaviors to the MITRE ATT&CK framework
- Developed Sigma, Splunk SPL, Microsoft Sentinel (KQL), and YARA detection content from investigative findings

GitHub: github.com/0x0allenace/behavioral-malware-analysis

Static Malware Analysis

- Performed static malware analysis using REMnux and FLARE-VM without executing malicious binaries
- Analyzed PE headers, metadata, imports, strings, hashes, and compiler characteristics using PESTudio, Detect It Easy (DIE), FLOSS, CAPA, ExifTool, and Strings
- Identified suspicious Windows APIs, persistence indicators, networking artifacts, registry references, and embedded Indicators of Compromise (IOCs)
- Documented investigative findings using an evidence-driven methodology aligned with malware triage and incident response workflows

GitHub: github.com/0x0allenace/static-malware-analysis

Cyber Threat Hunting with Splunk (BOTS v2)

- Investigated simulated enterprise attack scenarios using Splunk Enterprise and the BOTS v2 dataset
- Identified anomalous User-Agent activity, web reconnaissance, phishing attempts, and initial access techniques
- Developed SPL queries to identify Indicators of Compromise (IOCs)
- Mapped findings to the MITRE ATT&CK framework and documented detection opportunities

Velociraptor DFIR Investigation

- Investigated a simulated Mimikatz credential-dumping attack using Velociraptor
- Collected endpoint artifacts, analyzed persistence mechanisms, and reconstructed attacker activity
- Performed network-wide threat hunting for related indicators
- Mapped observed techniques to MITRE ATT&CK and documented incident response recommendations

Elastic Security Lab

- Deployed Elastic Stack with Fleet Server and Elastic Agent
- Investigated Windows telemetry generated by Sysmon and Elastic Defend
- Created detection rules and KQL searches for PowerShell abuse, persistence, and suspicious process execution

GITHUB PORTFOLIO

<https://github.com/0x0allenace/SOC-Analyst-Portfolio>

Featured Projects: Behavioral Malware Investigation, Static Malware Analysis, Splunk Threat Hunting, Velociraptor DFIR, Elastic Security Lab, Behavioral Anomaly Detection using Machine Learning

EDUCATION

B.Eng. Civil Engineering — Imo State University, Owerri (IMSU) | 2016

Languages: English
