PROFESSIONAL SUMMARY

Cybersecurity Analyst with hands-on experience in SOC monitoring, threat detection, incident response, and threat intelligence analysis, expanded with applied machine learning and research expertise. Strong foundation in log analysis, endpoint telemetry, and adversary TTP analysis using the MITRE ATT&CK framework. Designed and implemented an end-to-end behavioral anomaly detection framework using Isolation Forest, LOF, One-Class SVM, and Autoencoder-based neural networks. Skilled in Splunk, Elastic Stack, Wazuh, Elastic Endpoint Security, and Velociraptor.

PROFESSIONAL EXPERIENCE

Threat Intelligence Analyst — OZ Digital Tech Nig Ltd, Nigeria

Mar 2024 – Mar 2025

- Analyzed open-source and internal threat intelligence feeds and mapped threat actor TTPs to the MITRE ATT&CK framework
- Produced actionable intelligence reports with IOC enrichment and mitigation recommendations
- Supported SOC investigations and tracked malware, phishing, and ransomware campaigns

SOC Analyst — Suavetech Learning and Consult, Nigeria

Jan 2023 – Jan 2024

- Monitored and triaged SIEM alerts; investigated malware activity and unauthorized access attempts
- Performed log analysis across endpoints, servers, and network devices
- Conducted incident triage, escalation, and response support; tuned alerts to reduce false positives and documented incidents

PROJECTS AND HANDS-ON EXPERIENCE

Behavioral Anomaly Detection in Security Event Logs (Research Project)

- Designed and implemented a full end-to-end anomaly detection framework for enterprise security logs using unsupervised ML techniques
- Built a synthetic log generation system simulating credential stuffing, privilege misuse, abnormal sessions, and lateral movement
- Engineered behavioral features: temporal patterns, statistical deviations, rolling activity metrics, and composite risk scoring
- Evaluated Isolation Forest, LOF, One-Class SVM, and Autoencoder models using precision, recall, F1-score, silhouette, and ROC metrics
- Applied t-SNE and temporal heatmaps; demonstrated Autoencoder models outperform classical approaches

Cybersecurity Lab & DFIR Simulations

- Built and managed a multi-VM cybersecurity lab for SOC, DFIR, and threat hunting simulations
- Performed endpoint investigations using Elastic Endpoint Security and Velociraptor; conducted alert triage, IOC extraction, and MITRE ATT&CK mapping

CORE SKILLS

SIEM Monitoring & Alert Triage (Splunk, Elastic Stack, Wazuh) | Threat Intelligence & IOC Enrichment | MITRE ATT&CK Mapping | Incident Detection & Response | Endpoint Telemetry & DFIR | Behavioral Anomaly Detection | Machine Learning for Security Analytics | Elastic Endpoint Security | Velociraptor | Network Fundamentals (TCP/IP, DNS, HTTP/HTTPS)

TOOLS & TECHNOLOGIES

Splunk | Elastic Stack | Wazuh | Elastic Endpoint Security | Velociraptor | Wireshark | Honeypots | C2 Frameworks | Nmap | VirtualBox | Windows | Linux | Active Directory | MITRE ATT&CK

EDUCATION

B.Eng. Civil Engineering — Imo State University, Owerri (IMSU) | 2016 | Languages: English
